Dear Robin,

I write to lend my support to your order that Fraser Surrey docks have further research done regarding the health impact of coal traffic along the rail corridor.

I believe that it is important from both a scientific and a public perception perspective that the review be done in consultation with our provincial medical health experts. The process should also be transparent to the growing number of municipalities and citizens who have expressed reasonable unanswered concerns.

I am concerned, that without a transparent process involving the medical health officers, that many questions and concerns will either go unanswered or not be accepted by the majority of residents. I believe that every reasonable and responsible effort should be made to provide scientifically significant information in a transparent manner. I think that these steps are necessary in order to get "social license" for this project.

I appreciate your efforts in this matter and your willingness to review my concerns.

Thank You,

Gordon Hogg, MLA
Surrey- White Rock

Scott Hamilton, MLA
Delta North

Marvin Hunt, MLA
