Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Michael Foster

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Lois Danks

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped...
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Christina Dyson

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Shirley Peters

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped...
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. Dear Mr. Scott,

I don't know how Canadian regulatory system works. But I do know that the US American regulatory system was designed to assist in granting permits that only LIMIT the AMOUNT of harm that can be done to the environment. Our system -- which came out of environmental activism in the 1960s and early 1970s, and of which I was a part -- has failed to protect the environment. I believe we activists were slightly naive, and were deceived and tricked into believing that the US Environmental Protection Agency and other departments of "environmental quality" would do what their names say they will do. But some of us are realizing that the corporations and their people administer and control our regulatory system. You can read about a movement that is combating this now dire situation through passing local laws the fight against this corruption of our lives. http://celdf.org/section.php?id=423

Even though I am from the U.S., I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freigher traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Margaret HASHMI

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Willie McCoy

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Judy Dragoo

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River  

Dear Mr. Scott,  

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:  

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.  

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:  

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.  

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.  

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.  

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Andrea Higgins

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped

More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Bonnie O’Brien
20205 SE 152nd Street
Renton, WA 98059
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

- This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

- When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

- This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Kathleen Mahan

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Damiana Seabrook

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fullyscoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Aela Truheart

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

David Linn

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

Tax payers are getting raped. Oil spills are impossible to cleanup and corporations don’t do a good job of cleaning - therefore taxpayers must do the cleanup. The Salish Sea is impossible to clean - Period.

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Dale Kelley

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

David Langford
1221 S Grant Ave
Tacoma, WA 98405
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Annie Laurie Burke

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Les Berenson MD
6603 Aurora Ave No.
Seattle, WA 98103
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

E Ross

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Max DeNise

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

- This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

- When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

- This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Catherine Ross

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Glenn Thureson

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Kristina Peterson

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

- This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

- When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

- This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Linda Curry
253 Crescent Dr.
Kelso, WA 98626

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped...
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

David Peha

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

JoAnne Cummings

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

James Ploger

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly oppose your intention to build a coal port serving ocean-going vessels at your Surrey site.

This proposal will increase open-car coal train traffic through our residential communities, exposing us to more diesel exhaust, coal dust, more unsafe whistle noise, and damaging vibration.

When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada.

This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped environmental assessment before any approvals were granted for your project. To date these requests remain unanswered.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Joan Douglas

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Stacia Haley

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Garry Nakayama

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Thomas Libbey

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Consuelo Larrabee

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port's previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,
Ken and Joan Grieser

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped...
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Diana Nielsen

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freigher traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Brie Gyncild
1407 15th Ave
Seattle, WA 98122
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

- This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

- When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

- This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. We share their concerns about coal and "GLOBAL WARMING" and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

THERE IS NO DOUBT ANY MORE THAT BURNING COAL AND OTHER CARBON PRODUCTS ARE THE CAUSE OF GLOBAL WARMING. IF THIS PLANET IS TO SURVIVE, WE MUST STOP BURNING CARBON FOR ENERGY! ALREADY MANY SPECIS ARE EXTINCT, AND WE ARE HEADING AS FAST AS WE CAN TO MAKE SURE THAT LIFE ON EARTH GOES EXTINCT!

THE DEVESTATION FROM OPEN PIT MINES IS ANOTHER GRAVE CONCERN. THE POLLUTION FROM BURNING COAL IN CHINA DRIFTS OUR WAY, AND AFFECT OUR HEALTH. ALLREADY MANY ARE DYING FROM AIR POLLUTION, INCLUDING UNEXPLAINED CANCERS, ETC.
Sincerely,

Mr. Chuck Hanna-Myrick

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped...
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Florence Harty
1130 NW Baker Drive

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Lorinda Roland

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

10746 TRACIE CT.S.W.
OLYMPIA, WA 98512
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Gary Chamberlain

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

- This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

- When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

- This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Gary Pierson

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Jane Nelson-Low

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly disagree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site. This is a great idea.

There is little, just George Soros a criminal, opposition to your project.

We are deeply concerned how you are being mislead, this attempt to manipulate the energy market to benefit a Billionaire is disgusting. I trust Canada will make it safe to transport coal since there has NEVER been an issue.

There is a future in exporting thermal coal.

The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group and George Soros, that should say a lot.

I do not share their concerns about coal and climate change (A misnomer as dictated by Karl Marx.) We want our communities to host the ports of tomorrow, so we urge you to continue plans for this coal port and seek to expose George Soros attempt at manipulating the energy Market

The info against your plan is mostly funded by George Soros who is trying to bring down coal stock, so he can buy more of it, then you wont see these crazy petitions as he will want you to export coal. He is buying coal stock as we speak.

Sincerely,
Sal Miller
1100 Pike Street

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

gretchen carlson

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

(206)744-2619
Dear Mr. Scott,

I am from the U.S., and have traveled extensively in British Columbia, so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full
public hearings, an independent health impact assessment (HIA) and a fully-scoped environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Greg Wingard

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped...
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Birgit Llewellyn

More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Cliff Hansen

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

ELIZABETH SLOSS
2228 40th Ave East
Seattle, WA 98112
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped

In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Ruth Tooley

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Diane Tait Dong
13700 Avon Allen Road

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Kathleen Wheeler

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Donna Merlina

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Clean Power is are ONLY FUTURE what does it take to wake all of you UP We have ONLY ONE EARTH

Sincerely,

g g

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Clayton Conway

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Kathryn Schetzer

Dear Mr. Scott,

Last week I backpacked in our National forests. It was drier than I have ever seen it with rivers at all time lows. The air was hazy from the thousands of acres that are burning throughout our state. The city I grew up in (Seattle) is experiencing critically low water levels in it’s reservoirs. It has been the hottest, driest summer on record. When you leave the imagined safety of buildings and spend time living out in nature you become very aware of how quickly things can go sideways. Do not be hypnotized by illusions of safety. Do the right things to protect our one and only planet

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.
