Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.
Sincerely,

Cheryl Lawrence
348 High St
Freeland, WA 98249
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped...
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

- This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

- When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

- This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Dennie Carcelli

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Hollis Higgins

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Emily Van Alyne
6749 Whitestone Street
West Richland, WA 99353

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

E. Johnston

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Kurt Fickeisen

Dear Jeoff Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Kelley Slack
1811 34th Street
Bellingham, WA 98229
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Gordon Wood

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Diane Hetrick

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Melanie Kenoyer

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Luther E. Franklin

Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Stephanie Bell

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Willie Edwards

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freigher traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Toni Howard

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Laurie Levy

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scooped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Wendy Tanowitz

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

For the sake of our children and grandchildren leave the coal in the ground and don't build another port to cause more global warming.

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous
individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Liz Gaspar

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. • This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Philip R. Ronco

Milton, WA 98354
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scope

environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Gregory Loomis

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Cornelia Shearer

Auburn, WA 98092
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Maria Magana

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Dear Mr. Scott,

MAN HAS BEEN BURNING THINGS TO MAKE HEAT FOR TENS OF THOUSANDS OF YEARS, AND IT IS LONG PAST TIME FOR US TO WAKE UP TO REALITY, AND RECOGNIZE THAT WE HAVE A VIRTUALLY INFINITE SOURCE OF HEAT ABOVE US AS WELL AS BELOW US!!!

STOP THE BURNING!!! IT IS KILLING LIFE ON OUR PLANET!

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

david Pate
5066 Bayview Rd
Langley, WA 98260
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway."

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Ardeth L. Weed

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway."

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Essie Hicks

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Kristine Moore

Tukwila, WA 98188
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase FREIGHTER traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Gary Dering

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Maureen Steber

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Mayellen Henry

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Vicky Stamolis

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Scott Yoos

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped...
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

That includes new ports like the one you’re proposing.

- This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Joe Mabel

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Bill Leyrer

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tarsands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Sarah Collmer

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Charles Nafziger
17383 Peace Lane
Bow, WA 98232
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

J Heck

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward... Leave It In The Ground, if you and your children want a future on This Planet...

Sincerely,

The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Timothy Keeler

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Jasmine Reppen

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Sally Rodgers
1407 Jefferson Street
Port Townsend, WA 98368
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

khemarintr suwanchote

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Andy Hoffman

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Cynthia Moir

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

William Koopman

Olympia, WA ´98513
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Dan & Pat Montague

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Lisa Giacchino

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped...
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Roger Cruise
332 NE 24th Ave
Portland, OR 97232
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Mark Simpson

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

- This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

- When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

- This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, the regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Dan Freeman
4395 Rollinghill Rd.
Clinton, WA 98236
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Deborah Woolston

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Dear Mr. Scott,

This is your time in history to make a decision that is difficult but right and good and the Mark of a professional, a patriot, a world citizen, a realist, and a leader. This is your time to change the course of history for the better. You can be part of the answer and stand up to climate denialism and for the future of Vancouver and even the Port itself.

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Tamara Pokorny
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Tyler Nugent-Axt

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Gregory Pauley

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Kathleen Wolfe

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Carol Else

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Kate McWiggins

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

Though my grandfather was a well-respected mine superintendent, both at Black Diamond and Roslyn, the time for coal has passed. We need to concentrate on renewable energy sources, not filthy coal, etc.

No coal exports, anywhere, no more coal mines, renew our landscapes, and keep us safe!

Polly S. Tarpley
Granddaughter of Robert MacDonald Scott, who came to the United States of America from Brechin, Scotland in 1881!

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Amelia Petersen

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

María-Teresa de Balin
5313 NE 66th Ave B-15
Vancouver, WA 98661
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Thank you.

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Mr. Shelley Dahlgren, PhD

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

P M

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Alison Eckels

Seattle, WA 98103
Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Ronnie Arry

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

- This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

- When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

- This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Mr. Kevin Chiu

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

ruth riordan

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Ruth Darden

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freigher traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

- This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

- When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

- This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped...
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Wendy Atmore

Re: your proposal to build a coal port serving ocean going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Judith Butler

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Arnold Martin

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Heather Elder

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Renay Shaffer

More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Paul Nelson

Re: your proposal to build a coal port serving ocean-going vessels on the Fraser River

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you're proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

Dear Mr. Scott,

I am from the U.S., and so I am writing to say I strongly agree with the May 10th letter below, in agreement with the concerned Canadians that are speaking out in opposition:

We write in response to your announcement that you intend to replace plans for a coal barge loading facility with plans to build a coal port serving ocean-going vessels at your Surrey site.

We wish to inform you of our ongoing opposition to the construction of any coal operations on the banks of the Fraser River, for reasons including the following:

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

fred karlson

• This proposal will increase open-car coal train traffic through our residential communities. More coal train traffic means our families will be exposed to more diesel exhaust (a known carcinogen), more coal dust, and more nighttime noise from train whistles at levels deemed unsafe by the World Health Organization. Homes in neighbourhoods closest to rail lines will also be exposed to more potentially damaging vibration from heavy coal trains more than 2 kilometres long.

• When burned, the coal exported from Fraser Surrey Docks would release as much global warming pollution as the 6th largest polluter in Canada - just behind the two biggest tar sands processing facilities and the three biggest coal-fired power plants. Just last week UN Climate Chief Christiana Figueres said that in order to avoid runaway, catastrophic climate change there is no room in the world for new coal developments. That includes new ports like the one you’re proposing.

• This proposal will increase freighter traffic in the Salish Sea, increasing risk of oil spills and shipping accidents and impacts on wild salmon and endangered orca populations.

We remind you that in June 2013, Metro Vancouver, our regional government, voted overwhelmingly to oppose any coal exports from your Fraser River site. Numerous individual municipalities, including New Westminster, Surrey, White Rock, Delta, Richmond and Vancouver have either opposed this project outright or demanded full public hearings, an independent health impact assessment (HIA) and a fully-scoped
environmental assessment before any approvals were granted for your project.

The call for an HIA to fully evaluate the risks posed by your proposal came directly from our regional health authorities. Numerous health care groups and doctors have supported this request.

As you know, to date these requests remain unanswered. Public hearings, an HIA and a fully scoped EA have not taken place for this project. In general, the lack of meaningful consultation with the public, local and regional governments and health authorities has been an issue of ongoing concern during the review of your project.

There is widespread opposition to your project. The cities of Surrey and New Westminster have indicated they will apply to intervene in the legal challenge of the Port’s previous approval of your direct transfer coal facility, initiated by Communities and Coal, Voters Taking Action on Climate Change and two individual applicants. The Musqueam Nation has filed its own, separate legal challenge of the permitting of your facility as well. Further, we note that your company has been a strong advocate for removal of the George Massey Tunnel and deeper dredging of the Fraser River — modifications to the river would allow deeper draft vessels to reach your facility, effectively turning the Fraser into a “marine highway.”

We are deeply concerned that if these modifications come to pass your facility will begin exporting larger volumes of coal on bigger vessels. This will mean still more coal trains through our communities, more noise, diesel exhaust and coal dust, more ship traffic in the Salish Sea, and more climate-harming pollution when the exported coal is burned. This is not something we want to see happen in our region, and we know that our neighbours in Washington, Oregon, Idaho and Montana are working hard to stop more coal trains from running through, and new coal ports from being built, in their communities to avoid these same impacts.

Mr. Scott, we have nothing against your company and wish it well, but there is no future in exporting thermal coal. The end of the age of coal has been acknowledged by a wide range of organizations including the World Bank, HSBC, Goldman Sachs, the International Energy Agency the US Export-Import Bank and even executives of your company’s owner, the MacQuarrie Group. We share their concerns about coal and climate change and our opposition to this project will not end. We want our communities to host the ports of tomorrow, not the ports of yesterday. We urge you to abandon plans for this coal port and seek a different path forward.

Sincerely,

Judith Shardo
